

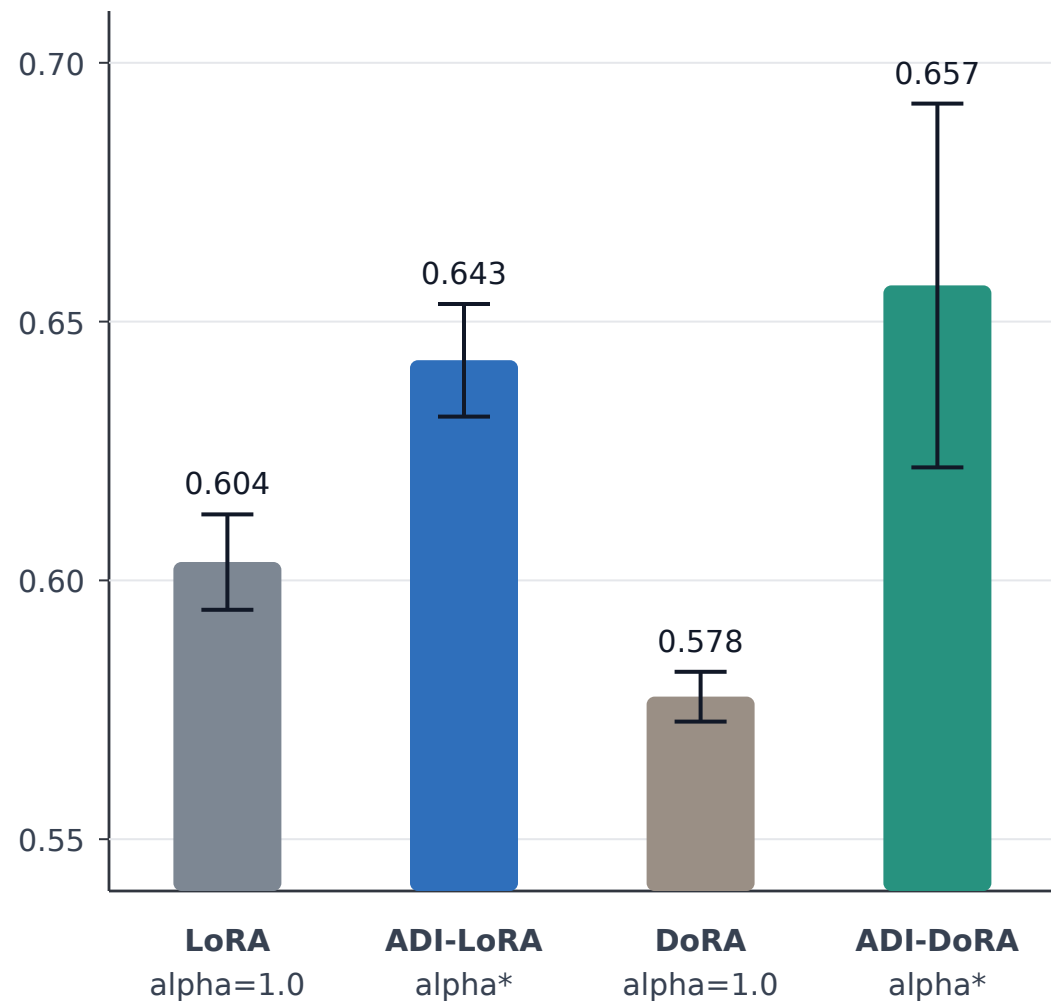

Fig. 5. Mechanism diagnostics on CIFAR-100 held-out Nearest

Mean +/- std over seeds 42/43/44; alpha* selected only from Bicubic/Bilinear validation.

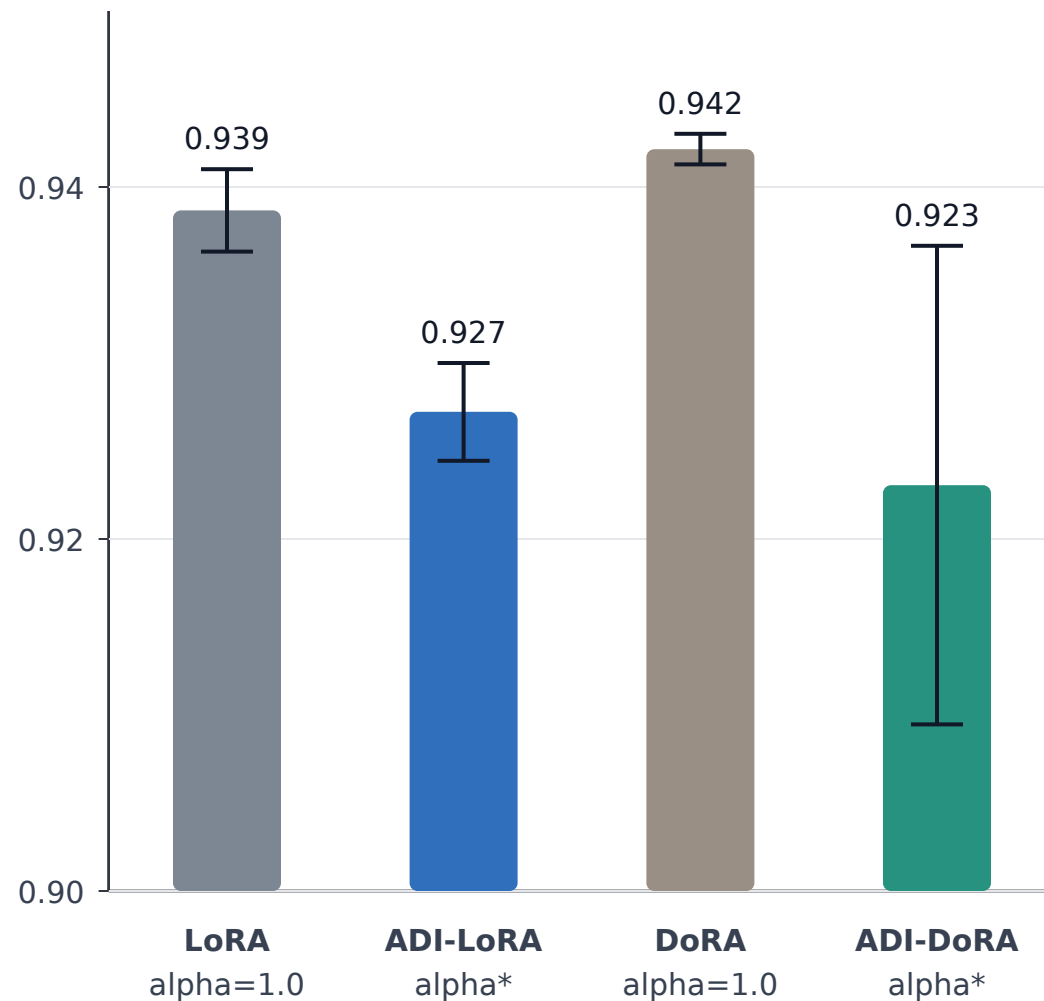

(a) CKA to frozen backbone

Higher means closer

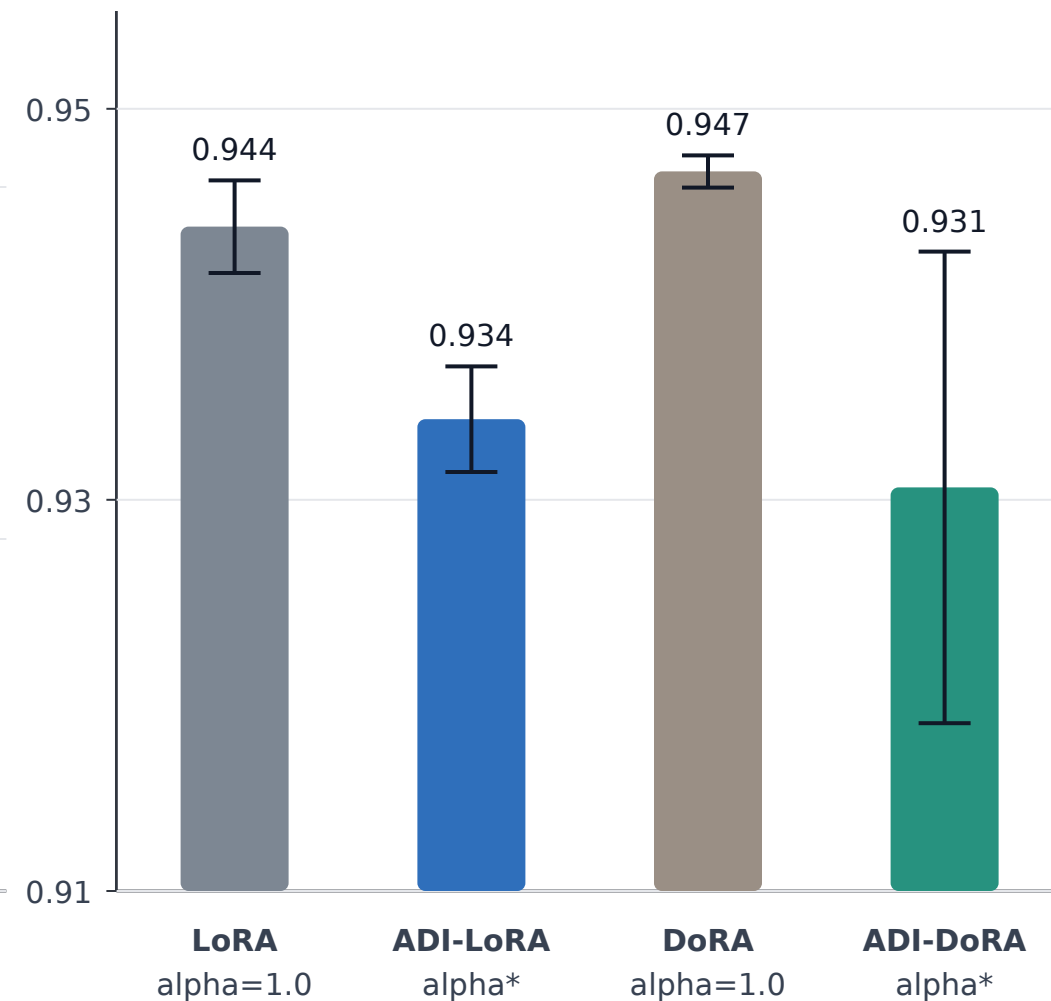

(b) SpecDist to frozen backbone

Lower means closer

(c) HighSpecDist to frozen backbone

Lower means closer

Baseline alpha=1.0 ADI validation-selected alpha* DoRA baseline alpha=1.0 ADI-DoRA validation-selected alpha*

Diagnostic only: these metrics suggest, not prove, reduced representation and spectral drift from the pretrained visual anchor.
